

## Low Ripple Switch Mode Power Supply

FM - PS3kW Magnetron / 2.45 GHz

### General Information

**FM - Low Ripple Switch Mode Power Supply for 3kW Magnetrons @ 2.45 GHz** is a series of power switch supplies. These power supplies contain all the necessary circuitry to drive a remote magnetron with regulated power, ranging from 10% to 100% of the rated power output. They contain circuitry for a fixed delay for magnetron warm up and continuous filament cut back operation. The control circuitry also provides status indicators, remote power regulation and the necessary connectors for wiring an external interlock circuit to meet microwave specific security demands.

The PS3KW power supply is able to power of all market usual magnetron types with a nominal power of 3kW @ 2.45 GHz.

### Key Features / Technical Details

- 19" rack mounted
- Low Ripple Current  $\leq 2\%$  , ideally for plasma applications and other most applications
- Stable filament control prolong the magnetron life
- Microcontroller based monitoring and controlling of all important Magnetron Operating Parameters like High Voltage and Current
- Sophisticated Design allows the generator always working at the ideal operating point ( high efficiency and longer magnetron lifespan)
- Low electromagnetic interference, improved fail-safe design against electromagnetic interference's
- Protective features to guard the magnetron and itself against failures
- Improved protective design to guard the person who accidentally touched the High Voltage
- Advanced alarm handling, all alarms can be displayed in a plain text Fieldbus-Interface
- Two different control options to suit most application requirements (e.g. PLC control or fieldbus control capabilities)
